

Enhanced Scar Care Base

Now available from Letco Medical!

new

An ideal solution that promotes healing of scars, burns and more.

Letco Medical Enhanced Scar Care Base is a topical anhydrous silicone gel. Silicone based therapies have been clinically shown to improve the appearance of most scars, including keloid and hypertrophic scars. This Enhanced Scar Base has been reformulated to include skin nurturing elements that may aid in reducing the appearance of scar tissue over time. Like our original Scar Care Cream, this improved formula contains ingredients shown to treat the color and texture of scars by reducing inflammation and renewing the skin. The result is softer, smoother skin, and less noticeable scars.

Silicone-based preparations have become the gold standard for scar treatment, and in gel form provide distinct advantages. Our base also contains *Carapa guaianensis* seed oil, an extract Amazonian cultures have used for centuries to treat inflammation and other ailments. It has been shown to maintain the intercellular structure of the epidermis and exhibit anti-bacterial activity while facilitating healing and regenerating the skin. Additional emollients and emulsifiers provide enhanced compounding versatility for various scar and skin conditions.

Quality and integrity are hallmarks of Letco Medical and the very essence of this product. It has everything your patients need for better scar treatment and management and a more positive attitude about their appearance.
